

Kara Walters  
Hotel Management Reservation

<https://github.com/karawalt/Module-8---Midterm-Project.git>

#### Demo - Walters

Making hotel reservations can be a cumbersome task. They can also be misleading when one views photos of a certain type of room only to find out on the day of check in that the room looks completely different. With the Hotel Reservation Management System (HRMS), it allows not only hotel managers and staff to see the specific rooms available but also those looking to make a reservation. For the hotel staff, they will be able to view and edit the list of rooms available. Those looking to make reservations will be able to:

- View updated photos of the rooms
- View a list of amenities for specific rooms
- View pricing for the rooms
- Make reservations for specific rooms
- Cancel / Edit reservations
